PREFACE TO ROAD LOG

The Federal Aid Road Log presents comprehensive information concerning the length, construction details and the location of individual projects and the routes which comprise these projects. The log is divided into the following principal sections:

1. Federal Aid Interstate System (Traveled Way)
2. Federal Aid Primary System
3. Federal Aid Secondary System
4. Summary of all Systems
5. Miscellaneous

The maps following the Table of Contents show the location of the Federal Aid Interstate, Federal Aid Primary, Federal Aid Secondary and Forest Highway Routes.

The log shows construction status as of January 1, 1970.

The following are brief descriptions of the items listed in each column:

Column 1 - U.S. and Montana Route Numbers - Indicates by number the officially designated U.S. and Montana routes coinciding with the various Federal Aid Routes (see tabulation of U.S. and Montana Route numbers on page IX).

Column 2 - Location and County - Identifies counties, municipalities, forests and reservation boundaries, route junctions and Forest Highway Routes.

Column 3 - Mile Post Reading.

Column 4 - State Maintenance Section Numbers - Indicates location of maintenance sections on each route (see tabulation on page VI showing section numbers and counties).

Column 5 - Project Number - Shows the project classification and number. Refer to page V for explanation of project classification.

Column 6 - Remarks - Explanatory remarks are listed below:

T - Type of road junction (see junction diagram).
Y - Type of road junction (see junction diagram).
1 - See footnotes at end of route for explanation of numerical symbols.

Column 7 - Year Built - Year shown is the original year in which contract work was completed which included present grading.

Column 8 - Year Improvement - Year shown is year of latest major improvement completed by contract or state forces. Asterisk indicates work was done by state forces.

Column 9 - Surface Type - Letters and code numbers indicate uniform surface type as recommended by the Bureau of Public Roads (see tabulation and explanation of code numbers following). Surface types are described below:

A - Primitive Road

An unimproved route (on which there is no public maintenance) usable by 4-wheel vehicles and publicly traveled by small numbers of vehicles.

B- Unimproved Road

A road using the natural surface and maintained to permit bare passability for motor vehicles, but not conforming to the requirements for a graded and drained earth road. The road may have been bladed and minor improvements may have been made locally.

C- Graded and Drained Earth Road

A road of natural earth alined and graded to permit reasonable convenient use by motor vehicles and drained by longitudinal and transverse systems (natural or artificial) sufficiently to prevent serious impairment of the road by normal surface water, with or without dust palliative treatment or a continuous course of special borrow material to protect the new roadbed temporarily and to facilitate immediate traffic service.

D- Soil Surfaced Road

A road of natural soil, the surface of which has been improved to provide more adequate traffic service by the addition of (1) a course of mixed soil having A - 1 or A - 2 characteristics, such as sand-clay, soft shale or topsoil or (2) an admixture such as bituminous material, portland cement, calcium chloride, sodium chloride or fine granular material (sand or similar material).

E- Gravel or Stone Road

A road the surface of which consists of gravel, broken stone, slag, chert, caliche iron ore, shale, chat, disintegrated rock or granite, or other similar fragmental material (coarser than sand) with or without sand-clay, bituminous, chemical or portland cement stabilizing admixture or light penetrations of oil or chemical to serve as a dust palliative.

F- Bituminous Surface - Treated Road

An earth road, a soil-surfaced road, or a gravel or stone road to which has been added by any process a bituminous surface course, with or without a seal coat, the total compacted thickness of which is less than one inch. Seal coats include those known as chip seals, drag seals, plant-mix seals and rock asphalt seals.

G- Mixed Bituminous Road

A road the surface course of which is one inch or more in compacted thickness composed of gravel, stone, sand or similar material, mixed with bituminous material under partial control as to grading and proportions.

G- 1 Nonrigid Base

A mixed bituminous road the base course of which is of other than types J, K, or L, and the combined thickness of surface and base is less than 7 inches or the design is such as to produce a road having a characteristically low or nonuniform load-bearing capacity.

G- 2 Rigid Base

A mixed bituminous road on any base of types J, K, or L; also on any other type of base where the combined compacted thickness of surface and base is 7 inches or more, or where, by reason of the presence of natural foundation materials which meet base requirements, the road has a characteristically high uniform load-bearing capacity.

H- Bituminious Penetration Road

A road the surface course of which is one inch or more in compacted thickness composed of gravel, stone, sand or similar material bound with bituminous material introduced by downward or upward penetration.

H- 1 Nonrigid Base

A bituminous penetration road the base course of which is of other types than J, K, or L, and the combined compacted thickness of surface and base is less than 7 inches, or the design is such as to produce a road having a characteristically low or nonuniform load-bearing capacity.

H- 2 Rigid Base

A bituminous penetration road the base course of which is of other than types J, K, or L; also on any other type of base where the combined compacted thickness of surface and base is 7 inches or more, or where, by reason of the presence of natural foundation materials which meet base requirements, the road has a characteristically high uniform load-bearing capacity.

I- Bituminous Concrete, Sheet Asphalt or Rock Asphalt Road

A road on which has been constructed a surface course one inch or more in compacted thickness consisting of bituminous concrete or sheet asphalt, prepared in accordance with precise specifications controlling graduation, proportions and consistence of composition, or of rock asphalt. The surface course may consist of combinations of two or more layers such as a bottom and a top course, or a binder and a wearing course.

J- Portland Cement Concrete Road

A road consisting of portland cement concrete with or without a bituminous wearing surface less than one inch in compacted thickness.

K- Brick Road

A road consisting of paving brick with or without a bituminous wearing surface less than one inch in compacted thickness.

L- Block Road

A road consisting of stone block, wood block, asphalt block or other form of block, except paving brick, with or without a bituminous wearing surface less than one inch in compacted thickness.

M- Combination Type Road

A road the wearing course of which consists of two or more individual types each being of such depth as to be classed logically as a part of the traffic bearing road surface rather than as surfaced shoulders.

Bridges

Structures of over 20 foot span, including both stream crossings and grade separations.

Z - This indicates that a bridge constitutes the entire project.

Partial – Partially reinforced pavement includes marginal and corner reinforcement; also there may be generally distributed reinforcement under 30 pounds per square (100 square feet).

Full – Fully reinforced pavement will require generally distributed reinforcing steel of not less than 30 pounds per square (100 square feet).

Column 15 - Construction - is the construction length of the project to thousandths of a mile.

Column 16 - Unimproved - this column contains road mileage which does not meet standards established for construction by State or Federal agencies.

Column 17 - Wye Mileage - this column contains branch mileage which is constructed as a part of the project to improve the connection with an intersecting highway. Mileage shown in this column is not included in route length. See junction diagrams for illustration of wye connections.

Column 18 - Municipal - shows mileage located within incorporated places.

Column 19 - County - includes rural mileage exclusive of mileage in reservations.

Column 20 - National Forest - includes mileage located within boundaries of National Forest.

Column 21 - Indian Reservation - includes mileage located within boundaries of Indian Reservations.

Column 22 - Other - includes mileage located within other reservations such as Military Reservations, State Forests, National and State Parks, Game Refuges, etc.

Column 23 - Coincident - this column shows coincident route mileage which occurs when two routes overlap. Where two Primary or Secondary Routes coincide, the mileage is shown as coincident for the route having the higher number and is deducted from the gross route mileage of this route.
